

SonicWALL Dealer of California

Central California Dealer

TOTLCOM is pleased to partner with SonicWALL. SonicWALL designs, develops and manufactures network security, secure remote access, web and e-mail security, continuous data protection, and policy and management solutions.

SonicWALL Firewall/VPN (Virtual Private Network) appliances provide defense against Internet security threats. They include deep packet inspection firewall, IPSec VPN for remote access, IP address management features and support for SonicWALL value-added security services.

SonicWALL Internet security appliances are available in varying sizes for small, medium and large networks - and wireless. Firewalls are not brand specific in what system or network they will work with - so even if we don't support your specific phone system or built your LAN/WAN, we can assist you with acquiring and configuring the appropriate SonicWALL devices to protect your business from threats.

SonicWALL's SSL-VPN (Secure Socket Layer-VPN) Appliances meet the demands of today's expanding mobile computing environment.

SonicWALL SSL-VPN solutions can be configured to provide users with simple, secure and clientless remote access to a broad range of resources on the corporate network.

Using only a standard Web browser, users have access to:

- Files and file systems (includes support for FTP (File Transfer Protocol) and Windows Network File Sharing)
- Web-based applications
- Microsoft Outlook Web access and other Web-enabled applications
- HTTP(Hypertext Transfer Protocol) and HTTPS (Secure) intranets
- Applications installed on desktop machines or hosted on an application server
- Full remote control of desktop or server machines
- Terminal Services, VNC (virtual Network Computing), RDP (Remote Desktop Protocol), Telnet and SSH (Secure Shell)
